ADHD, ages 6-12
The target population is the child (ages 6-12) with a newly prescribed ADHD medication.

1. For children with a newly prescribed ADHD medication within the last year, there was a follow-up face-to-face visit with a prescribing provider **WITHIN 30 days** of when the **FIRST ADHD MEDICATION** was dispensed.

2. The child continued on a medication to treat ADHD, and he/she had at least 2 more ADHD visits, **WITHIN THE NEXT 9 MONTHS** with a provider after the medication was dispensed.

3. There is documentation that there has been **COMMUNICATION WITH THE CHILD’S TEACHER** in the past year regarding the child’s progress in **SCHOOL**.

4. **ALL ADHD visit notes are dated and include the SIGNATURE and CREDENTIALS of the provider of service.**
