HEALTH PROMOTION MEDICARE ADULT, ages 65-80

The target population is the adult (65-80) that had a general adult medical exam with a primary care provider within the specified timeframe.

1. There is documentation that the patient has been asked about **ALCOHOL CONSUMPTION**, including quantity, in the past year.

2. There is documentation that the patient has been asked about **CONTROLLED SUBSTANCE** use in the past year.

3. There is documentation that the patient has been assessed for **DEPRESSION** symptoms by use of a depression assessment tool in the past year.

4. There is evidence or an assessment of patients **EXERCISE/PHYSICAL ACTIVITY** in the past year.

5. There is evidence of the patient’s **BLADDER CONTROL** in the past year.

6. There is evidence of a comprehensive **FUNCTIONAL STATUS ASSESSMENT** in the past year.

7. There is evidence of a **PAIN ASSESSMENT** and the date on which it was performed during the last year.

8. There is evidence that the member is up-to-date on their **MAMMOGRAM** screening (females only).

9. There is evidence that the member is up-to-date on their **COLON CANCER** screening.

10. There is evidence in the medical record that the patient does or does not have an **ADVANCED DIRECTIVE**.

11. If the member does not have an advance directive, there is documentation of an **ADVANCE CARE PLANNING DISCUSSION** during the last year and the date on which it was discussed.

12. In the past year, there is a **MEDICATION LIST** in the medical record AND evidence of a **MEDICATION REVIEW** by a prescribing practitioner or clinical pharmacist and the date on which it was performed: OR notation that the member is not taking any medications and the date on which it was noted.

13. The visit note is dated and includes the **SIGNATURE and CREDENTIALS** of the provider of service.
